

Spatial Business Systems

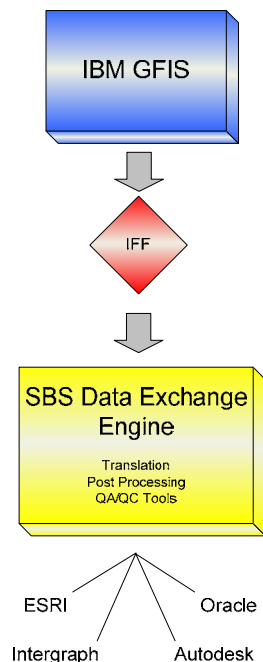

GFIS Migration Capabilities

Spatial Business Systems, Inc. is a geospatial technology consulting firm based in Denver, Colorado, USA that is highly experienced in all aspects of spatial data migration. Spatial Business Systems personnel have performed over 100 engagements in support of the utility, telecommunications and government markets and have implemented successful data migration projects involving nearly all common GIS platforms as well as some very unique systems.

GFIS Migration Solutions:

IBM GFIS Migration Experience Spatial Business Systems personnel have extensive experience in the migration of IBM GFIS data. The company principals come from a strong GFIS implementation background which included employment within the IBM GFIS product development organization. Company personnel were also involved with the development of formal GFIS migration methodologies. Our experience includes a detailed understanding of the GFIS IFF format including IFF picture segments, point connectors and facility types.

Solution Methodology – Spatial Business Systems has a highly proven methodology for performing spatial data migration

projects. Our approach involves not only the translation of graphic data elements but a comprehensive methodology for gathering network connectivity, annotation, attribution and critical components of your GFIS data to ensure high quality translation with greatly reduced manual clean-up activities. The proprietary Post-Processing and Quality Control / Quality Assurance software tools allow us to identify potential data problems early in the process so a well planned data clean-up approach can be taken if necessary.

A Total Migration Solution – A properly planned migration involves dealing with the uncertainty of different data sources, legacy application environments and the very important aspects of making sure that users are ready to exploit the new environments. SBS consultants have an unparalleled track record in moving utility organizations forward with their spatial systems while preserving the important investments that have been made in spatial data.

SBS – the Spatial Data Migration Experts Spatial Business Systems has an unparalleled track record in spatial data migration. SBS consulting professionals have been involved in the following IBM GFIS migration accounts: Wisconsin Gas, Washington Gas, PSCo, Minnegasco, Entex, Duke Energy, Florida Power and Light, CitiPower, Sydney Power and Salt River Project. We also support an extensive range of data migration product formats including Autodesk, ESRI, FRAMME, Oracle/Oracle Spatial, MapInfo, Synercom, VISION*, DB2 Spatial Extender, UltiMap and others.
