

Strategic Asset Management Solution Overview

Strategic Asset Management is powerful business simulation software that allows utility and telecommunication companies to develop strategic and operational asset replacement strategies. By performing a structured assessment of their operational, investment and lifecycle models, organizations can build long term asset strategies based on key performance indicators for the business. Strategic Asset Management has been developed by FICHTNER IT CONSULTING of Germany and is distributed by Spatial Business Systems

Strategic Asset Management Key Features:

Strategic Asset Management supports the development of asset replacement strategies can be developed based on several key analysis elements.

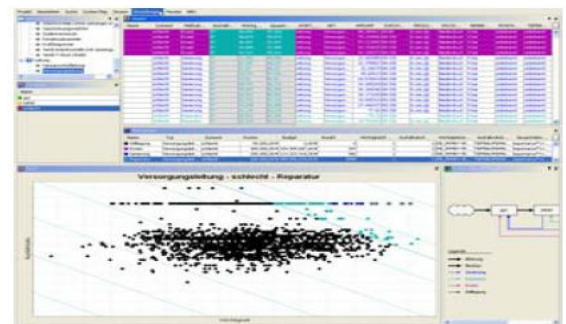

- Scenario simulation to determine optimal maintenance, repair and maintenance strategies
- Graphic visualization of results to compare replacement approaches
- Sensitivity analysis to identify prime parameters
- Modeling of the complete asset life cycle
- Automated optimization under specified constraints

Once the strategic plan is in place the operational approach to implementing an asset replacement strategy can be integrated with an organization's business requirements.

Benefits of Strategic Asset Management:

- Organizations can optimize their asset replacement strategies and reduce costs while maintaining appropriate levels of risk control
- Asset management strategies can be developed in accordance with business key performance indicators
- Improved system reliability while reducing operating costs
- Integration of strategic and operational business practices to ensure day-to-day asset management activities are consistent with long-term business strategies
